Case study

The Hurlingham Project

Peter Dann have been involved from conceptual design stage for The Hurlingham project - a new four-storey retail and residential building.

The former pub is located close to the River Thames in Fulham, and the existing structure is being replaced while the masonry façade is preserved.

This is a challenging project involving a new deep basement (6.5 meters) which is now completed. It extends below the water table and is formed by secant piled walls. The basement will provide ample storage for the ground-floor retail occupancy.
