

Civil + Infrastructure

Many projects we become involved with have aspects of specialist civil engineering and infrastructure work. We have strong in-house capability to deliver drainage infrastructure from strategic pre-planning through to detailed design and construction. Our team can advise, design, obtain necessary approvals and consents and can manage all types of all drainage works.

We also undertake highway engineering solutions from feasibility through to construction stage. We can deliver all types of highway infrastructure from private access roads to strategic highway and junction design. Our full scope of services includes:

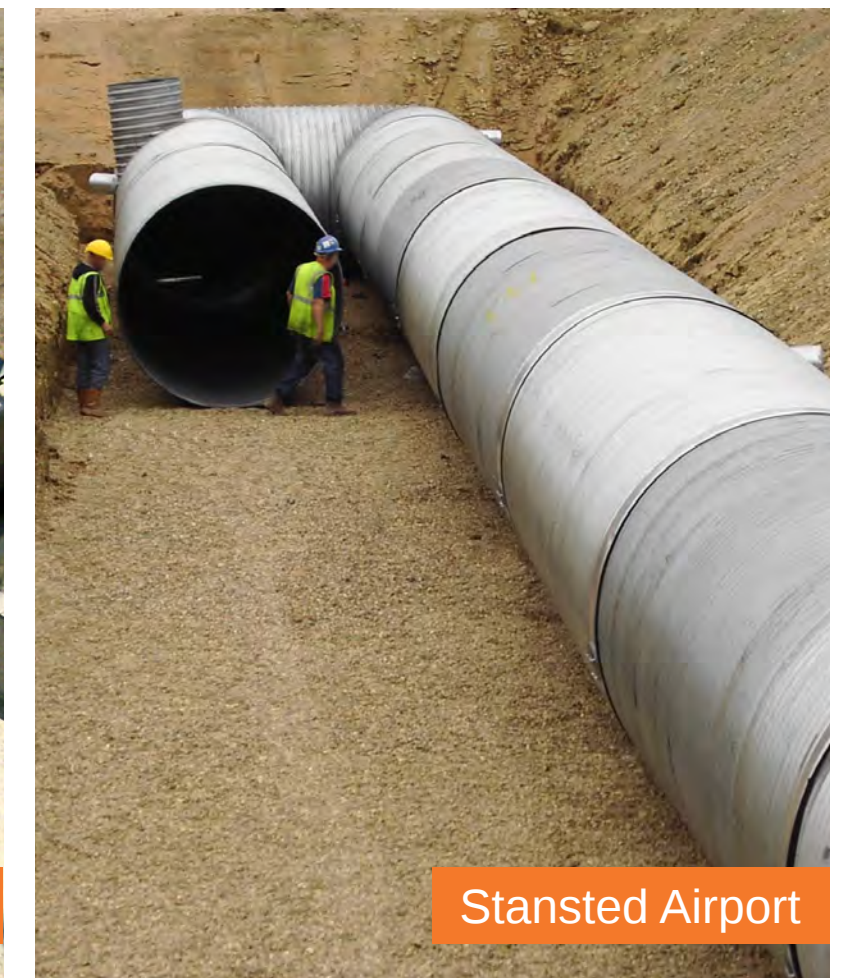

- + S278/S38 Agreements
- + Geometric junction, horizontal and vertical road alignment design
- + Highway/Earthworks specification
- + Highway feasibility studies/Approval in Principle negotiations
- + Private road and hardstanding design
- + Surface water Drainage Strategies & Flood Risk Assessments
- + SuDs design
- + Foul water drainage strategies
- + Discharge agreements/Drainage consents/Adoption agreements
- + Private drainage/plot engineering
